

Welcome!

The purpose of today's meeting is to present preliminary design, answer questions and receive your input.

Project Background

72nd Street, between F Street and just south of I-80, serves as a vital connection for commuters and industrial businesses in the area. This connection is dependent on the ability to meet traffic volumes during peak hours. As the existing bridge is reaching the end of its useful life, and current traffic demand has put this corridor over capacity, improvements are needed.

Proposed improvements include replacing the existing bridges with a wider and lower maintenance bridge, or bridges, to accommodate three lanes of traffic in each direction with a sidewalk on the east side. This project will:

-  **Improve capacity**
-  **Improve safety**
-  **Decrease congestion**

Project Detour

During construction, detours may be necessary. The Project team is in the process of finalizing the details of the detour route and area stakeholders will be contacted before construction begins.

Current Daily Traffic

40,400
vehicles

Projected 2040 Traffic

56,900
vehicles

Estimated Construction Cost

\$8.8 Million

Project Schedule

We want your input!

There are several opportunities to provide input or ask questions of the Project team:
